

Loglinear Model Exercise

Modify the SAS code for loglinear models using GSS data to answer the following questions about the suicide data:

1. Using PROC FREQ, identify which reasons for suicide have the most and least acceptance.
2. Find a parsimonious model for the suicide data.
3. Explain the signs of any interaction terms. Interpret at least one interaction term.
4. Is the model more or less complex than the freedom of speech data? Explain why.
